# PRODUCT INFORMATION BULLETIN **AVIENT SPECIALTY INKS** 2564 Infinite FX Nova Base 2564 Infinite FX Nova Base is a multi-purpose special effect ink for creating dry flake glitter **Fabric Types**

effects and other specialty print surfaces. When mixed with a glitter particle flake, 2564 Infinite FX Nova Base has the ability to penetrate the fabric and leave the glitter flake exposed and dry to touch. 2564 Infinite FX Nova Base allows the glitter flake to retain its edge sharpness and brilliance when printed onto light and dark fabrics.

>>

### **HIGHLIGHTS**

\$ Multi-purpose specialty base that creates textured surfaces when pigments, finished inks or particles are added

Excellent wash properties. Glitter stays on the design!

Low-cure, save energy

- \$ Base penetrates fabric, leaving glitter flake exposed and dry. Allows glitter to retain sharp edges, shine and clarity
- Tintable with plastisol colorants

### **PRINTING TIPS**

- Use consistent, high-tensioned screen mesh and sharp edged squeegees for best print results. - 22 Recommended mesh counts can vary depending on particle size
- \$ Mix up to 15% glitter particles dependent on particle size and desired look, mix thoroughly. A particle size of .008" x .008" is a good recommendation
- \$ Print in last position or flash after each print if using multiple screens
- \$ Use a heavy flood stroke and then light squeegee pressure to print Nova Base and glitter particle ink onto the garment. Excessive print pressure can cause too little base to be on the surface for a good adhesion to the flake
- \$ To achieve the dry flake effect, print 2564 Infinite FX Nova Base and glitter mixture directly onto the fabric to allow the base to penetrate into the garment. To achieve a glossier look, print the ink onto a flash-dried base plate
- \$ Tintable with plastisol colorants. See Pigment Loading section for suggested tinting percentages. Adjust the % colorant added based on the strength of the colorants and color saturation desired
- \$ Metallics reflect infrared heat and a forced air dryer is recommended for curing. If using an electric oven, extend dwell time to achieve proper cure
- \$ Curing is a time and temperature process, a lower oven temperature setting with a slower belt speed while maintaining recommended ink cure temperature is always best to protect fabric, control dye migration and reduce energy consumption
- \$ INFINITE FX NOVA BASE can be cured between 270°F - 320°F (132°C - 160°C)

### COMPLIANCE

- Non-phthalate ø
- > For individual compliance certifications and conformity statements, please visit www.avientspecialtyinks.com/services/compliance-support

### PRECAUTIONS

The information above is given in good faith and does not release you from testing inks and fabrics to confirm suitability of substrate and application process to meet your customer standards and specifications

### **RECOMMENDED PARAMETERS**

100% cotton, blends, some synthetics

Count: 24-61 t/in (9-24 t/cm) Tension: 25-35 n/cm2

Squeegee Durometer: 60/90/60, 60-70 Profile: Square, Sharp Stroke: Hard flood, Medium stroke Angle: 10-15%

2 over 2 Off Contact: 1/16" (.2cm) Emulsion Over Mesh: 15-20%

#### Flash & Cure Flash: 220°F (105°C) Cure: 270°F (132°C) Entire Ink Film

**Pigment Loading** up to 5% Wilflex PC up to 10% Wilflex EQ up to 15% Wilflex RIO / MX up to 10% Rutland C3 Boosters

Additives N/A

## Storage

65-90°F (18-32°C) Avoid direct sunlight Use within one year of receipt

Dispose unused ink responsibly. Standard plastisol cleaners, press wash, or ink degradant
